Boil Water Advisory Issued for Pennsylvania American Water Customers in Parts of Norristown and Plymouth Township

NORRISTOWN, Pa. (July 6, 2026) – Pennsylvania American Water routinely monitors the conditions in the distribution system. Earlier today there was a loss of positive pressure in the distribution system due to an equipment failure. A loss of positive water pressure is a signal of the existence of conditions that could allow contamination to enter the distribution system through backflow by back pressure or back siphonage. As a result, we are issuing a boil water advisory for customers in the affected area.

This notice applies to 1,069 customer connections in Pennsylvania American Water's Norristown system in the Municipality of Norristown and Plymouth Township.

For a map of the affected area, [click here](#).

DO NOT DRINK THE WATER WITHOUT BOILING IT FIRST. Bring all water to a rolling boil, let it boil for one minute, and cool before using; or use bottled water. You should use boiled or bottled water for drinking, making ice, washing dishes, brushing teeth and food preparation until further notice.

Inadequately treated water may contain disease-causing organisms. These organisms include bacteria, viruses and parasites, which can cause symptoms such as nausea, cramps, diarrhea and associated headaches.

These symptoms, however, are not caused only by organisms in drinking water, but also by other factors. If you experience any of these symptoms and they persist, you may want to seek medical advice.

Guardians of infants and young children and people at increased risk, such as pregnant women, some of the elderly, and people with severely compromised immune systems, should seek advice from their health care advisors about drinking this water. General guidelines on ways to lessen the risk of infection by microbes are available from EPA's Safe Drinking Water Hotline at 1 (800) 426 4791.

What happened? What is being done?

The equipment has been repaired and positive pressure restored. The company is also collecting and analyzing additional water quality samples including bacteria samples. We will inform you when you no longer need to boil your water. **For more information, visit**
