

HISTORICAL SOCIETY OF MONTGOMERY COUNTY ANNUAL LUNCHEON

THE ASTRONOMIC ACHIEVEMENTS OF DAVID RITTENHOUSE

Born in 1732, David Rittenhouse came of age at a time when the entire world was turning its head towards science. Self-taught, Rittenhouse would become a craftsman, an astronomer, a surveyor, an instrument maker and a scientist. Alongside the likes of Benjamin Franklin, Rittenhouse would lead the early United States into the world of enlightenment. Rittenhouse served as President of the American Philosophical Society and as treasurer of Pennsylvania, and the first Director of the U.S. Mint. He observed the transit of Venus and helped to survey Pennsylvania's borders.

Saturday, November 9, 2019
